Eckhel's numismatics opus is one of the major foundation works of modern scholarly numismatics. Joseph Hilaricus Eckhel (1737-1797) has been justly regarded as the "father of ancient numismatics" and his Doctrina as the major exposition of his principles. "With him began a new era in the study of ancient numismatics: rigid scientific methods entered the field of research supplementing the usual approach of the amateur. For the first time in its history the basic elements of ancient Greek and Roman numismatics - metals, potential systems, organization of mints, significance of coin-types, coins in their relation to the history of art - are simply discussed." - Clair-Stefanelli, Numismatics, page 29.
